Packaging All plastic parts of the appliance are identified with internationally standardised abbreviations (e.g. PS polystyrene). Therefore, plastic waste can be sorted out when the appliance is being disposed of. Please follow the safety instructions under "Delivery". Water softening system / special salt To ensure good rinsing results, the dishwasher requires soft water, i.e. water which is low in lime, otherwise limescale will be deposited on the utensils and interior container. Tap water above 7° dH (1.2 mmol/l) must be softened. The water is softened with special salt (regeneration salt) in the water softening system of the dishwasher. The setting and therefore the required amount of salt depends on the degree of hardness of your tap water (see following water hardness table). Not suitable Cutlery and utensils made of wood. Delicate decorative glasses, craft and antique utensils. These decors are not dishwasher-proof. Plastic parts not resistant to heat. Copper and tin utensils. After my dishwasher has finished its cycle, the container that holds the tablet hasn't opened. How is this possible? Verified This problem is often caused by dishes that are blocking the container. Check this before turning on the dishwasher. This was helpful (6894) The dishwasher does not heat the water anymore, why is that? Verified It is likely that the heating element is defective. Have it replaced. When in doubt, contact the manufacturer. This was helpful (5419) Can I use regular salt in my dishwasher? Verified No, regular salt may contain substances that can cause damage to your appliance. This was helpful (2662) Do I need to rinse my dishes before putting them in the dishwasher? Verified Rinsing the dishes is not necessary, but you do need to remove any large, hard and fat leftovers. These could clog the drain over time. This was helpful (975) Can I open the dishwasher while it is running? Verified Most dishwashers are equipped with a water stop, making the program stop immediately when the door is opened and meaning no water will come out. With some models this can cause problems over time. With built-in dishwashers it is possible that frequently opening the dishwasher while running may cause water damage to surrounding cabinets because of the steam that is released. This was helpful (638) My Bosch dishwasher displays error "E24", what does that mean? Verified This means the drainage hose is blocked or kinked. Remove any possible blockages and kinks. If this does not help you should contact the manufacturer. This was helpful (628) Should I open the dishwasher after it finished running to have the dishes dry quicker? Verified This depends on the type of dishwasher and the location of the dishwasher. Some dishwashers are equipped with a feature that dries the dishes after the washing program. In that case opening the dishwasher will have no added value. With built-in dishwashers it is possible that frequently opening the dishwasher while running may cause water damage to surrounding cabinets because of the steam that is released. This was helpful (521) After the dishwasher has finished its cycle, the plastic dishes are still wet but the rest isn't. Why is that? Verified Plastic is a bad conductor of heat, allowing the products to cool down quickly. The moisture that remains on it then evaporates far less than for example on ceramics or metal. This was helpful (457) Can I connect a dishwasher to an extension cord? Verified Appliances that require large amounts of power, like a dishwasher, can not be connected to all extension cords. See what the power usage of the dishwasher is, which is indicated in Watt, and check if the extension cord can handle this. There are extension cords with thicker cables that are made to handle larger appliances. This was helpful (372) Can I put pans with Teflon in the dishwasher? Verified Yes, you can. However, the pan will wear faster than when it is cleaned by hand. When cleaning a pan with Teflon by hand, never use a scourer but use a soft sponge or cloth. This was helpful (371) Can I put wooden objects such as spatulas and cutting boards in the dishwasher? Verified No. Wooden objects can get damaged or warped in a dishwasher. Also, the wood fibres that come free might damage the dishwasher. Wooden cutting boards are often made with glue that can come loose after being in the dishwasher several times. This was helpful (370) Is it a problem to have scratches on the metal on the inside of the dishwasher? Verified The inside of most dishwashers is made of stainless steel and are not affected by scratches. This was helpful (369)
